Google Local Dataset

Overview

The Google Local dataset stores information about Google Map *users*, *places* (e.g., restaurants) indexed by Google Maps and reviews written by users for places they have visited. Table 1, 2 and 3 detail the attributes of the Users, Reviews and Places datasets, respectively.

Dataset: Users (21,848 records)	
Attribute Name	Description
gPlusUserId	Unique identifier for each user (Primary key)
userName	Username of the user (not unique)
jobs	User's job
currentPlace	Current city/country/state of a residence
previousPlaces	Previous city/country/state of a residence
education	User's educational background

Table 1. Summary of Users dataset

Dataset: Places (22,484 records)	
Attribute Name	Description
gPlusPlaceId	Unique identifier for each place/business (Primary key)
name	The name of the place/business
price	Price range of the place/business. The price range is denoted using one dollar sign, two dollar, three dollar signs etc.
address	Address of the place/business
hours	Hours for each day of the week when the business/place is open
phone	Phone number of the place/business
closed	**True**: place/business is permanently closed **False**: place/business is still operating

Table 2. Summary of Places dataset

Dataset: Reviews (22,272 records)	
Attribute Name	Description
gPlusPlaceId	Foreign key of Places dataset
gPlusUserId	Foreign key of Users dataset
rating	5: very positive, 4:positive, 3:neutral, 2:negative, 1:very negative
reviewerName	Name of the reviews
reviewText	Textual content of review
categories	Category of the business/place (e.g., restaurant, pub, café) for which the review was written
reviewTime	Date when review was submitted

Table 3. Summary of Reviews dataset
